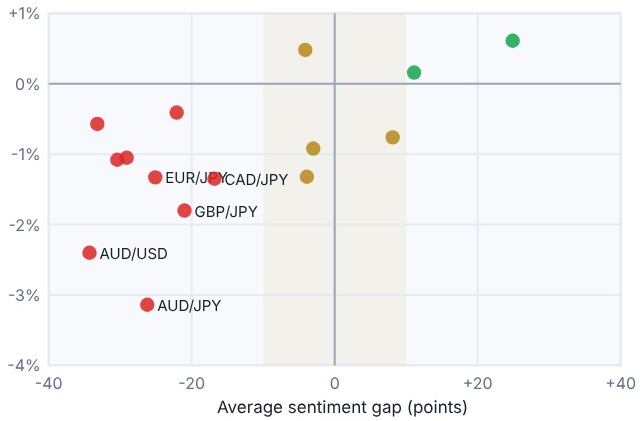
Avg gap: base minus quote weekly mean; Bullish above +10, Bearish below -10. Week return: percent change of the reference quote over the trading week. Direction compares the sign of the gap with the sign of the return for pairs with a bias. Call rate shown from 8 scored calls, as on the public scorecard.

GAP VS RETURN, 15 PAIRS

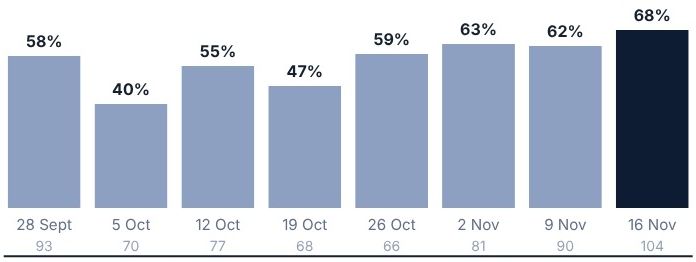
r = 0.64



Each dot is one pair. Shaded band: no bias (gap within ±10). Pairs share currencies, so the points are not independent; one week is an observation, not evidence.

SESSION-CALL HIT RATE, LAST 8 WEEKS

aligned / scored



Week starting date; the small figure under each bar is the number of scored calls (aligned plus contra). Quiet and no-call sessions are excluded.

DOES CALL STRENGTH MATTER?

all settled calls since 6 Aug 2026
